

To Lower Energy Costs, Look Up.

Rooftop units (RTU) are work horses when it comes to keeping your commercial building cool in the summer and warm in the winter. Adding Advanced Rooftop Unit Controls (ARC) to existing units enables them to do all that more efficiently, while lowering energy costs too. Now is the ideal time to talk with your contractor about which ARC technology and incentives could work for you.

More control of costs and comfort

ARC adds multi-speed functionality to RTU fans, which means they automatically match fan speeds to the building's needs. In addition to saving energy, lowering costs and reducing wear and tear on equipment, ARC improves air quality and comfort. Our incentives top off the deal.

INCENTIVE

\$

Per ton of cooling capacity for qualifying ARC Full retrofits.

\$

Per ton of cooling capacity for qualifying ARC Lite retrofits.
