

The Best Light is in Your Control

As a building or business owner, you can improve lighting, reduce energy usage and lower costs with networked lighting controls. Today's controls are easier to install and operate than ever before, and they offer many high-performance features.

Quick to install, simple to use

With NLCs, there's no rewiring so installation is quick. Plus it's easy to set up specific lighting functions in one area or the whole building with just a few strokes on a computer, phone or tablet.

Next level features and energy savings

NLCs provide the right light when and where it is needed, both indoors and out. By helping to extend the life of your lighting system and using less energy, controls save money, improve your ROI and shorten your payback. Plus, additional incentives for controls may be available, helping you reduce your upfront costs.

Get more for your money

Ask your contractor or contact us about adding controls to your lighting project. You'll get the best light quality and most aggressive energy savings on the market.

A wide arc of benefits

Increased energy savings over facilities without controls

Better lighting system control may also improve light quality

Lower maintenance costs

Longer life for fixtures

Simple adaptability for new tenants or changes in use of space

Save money on overhead costs
