

The best light is in your control

With networked lighting controls, you can improve lighting, reduce energy usage and lower costs. What's more, their simple-to-operate features can increase occupant satisfaction and customer experience. Additional incentives for controls may be available to help reduce upfront costs.

A simple solution for energy savings

The wireless connection means NLCs are quick to install and easy to manage from an app. By providing the right light when and where it is needed, both indoors and out, controls help extend the life of your lighting system, reduce maintenance costs and improve your ROI.

Get more for your money

Ask your contractor or contact us about adding controls to your lighting project for the most aggressive energy savings on the market.
