

## TLED

FOR COMMERCIAL  
BUILDINGS

# Claim Great Incentives on LED Lighting for Commercial Buildings

Now's the time to take advantage of new measures offering up to a 400% increase in incentives on LED tubes (TLEDs) for commercial buildings.

In many cases, TLEDs can be a plug-and-play replacement for existing bulbs, and they offer energy efficiency, monetary savings and quality lighting.

## How Do TLEDs Save Energy?

Typically, TLED lamp upgrades reduce wattage by more than 30%. Additional energy savings can be captured by:

- Removing excess heat in refrigerated spaces.
- Dimming capabilities offered through Type C LED systems.

### YOUR BUSINESS MAY BENEFIT FROM:

Improved  
light quality

Reduced  
maintenance

Rapid full brightness,  
no lamp warm-up

Potential  
dimming features

Find out how to receive incentives on  
TLEDs that are right for your commercial space.  
Contact your Trade Ally Network NW field specialist or your local utility.

# Incentive Requirements

**Measure Series B: LED Tubes** - All sizes and configurations (Type A, B, C) including 4', 8', irregular lengths and U-bends. Minimum required wattage reduction greater than or equal to 30%.

## Type B and C LED tube are eligible for \$

**Type B:** Ballast bypass or line voltage lamps require the removal of the existing ballast and lamp sockets to be wired directly to the lighting circuit as per manufacturer instructions.

**Type C:** Replace the fluorescent ballast with an LED driver that potentially offers dimming. This system is similar to the original fluorescent where low-voltage current is supplied to the sockets.

## Type A LED tubes still receive an incentive of \$

**Type A:** Use existing fluorescent ballast. Not all lamp and ballast combinations are compatible, verify before installation.

### Pre-conditions - TLED Retrofit:

- Existing buildings, interior and exterior lamp upgrades.
- Refrigeration cases.
- Signage.

### Post-condition:

- LED lamp installation verified with installation cost. Qualifies for incentive.
